## Uygulama Tanımı:

Ödevde bizden veri tabanına bağlı bir uygulama geliştirmemiz istenmiştir. Bizde hasta, doktor, randevu ve reçete işlemlerinin yapılabildiği C# dilinde yazılmış bir hastane otomasyon uygulaması tasarladık.

## İş Kuralları:

1. Kişiler sisteme giriş yapabilmek için kullanılacak şifreye sahiptirler.
2. Kişiler personel veya hasta olabilir. (İkisi birden olamaz)
3. Bir doktor yalnızca bir klinikte çalışabilir ve bir klinikte birçok doktor çalışabilir.
4. Hastanenin eşsiz hastane numarası, hastane adı ve oda sayısı mevcuttur.
5. Hastane malzemelerinin adı ve miktarı bulunur.
6. Kliniğin eşsiz bir numarası ve adı mevcuttur
7. Yatan hastaların yatış tarihi ve numara bilgileri bulunur.
8. Taburcu olanların yatış tarihi saklanır.
9. Muayenenin hasta durumu ve numara bilgileri bulunur.
10. Bir doktor birden fazla kişiyi muayene edebileceği gibi kimseyi muayene etmeyebilir. Bir muayene yalnızca bir doktor tarafından gerçekleştirilebilir.
11. Randevunun tarihi saklanır.
12. Bir hasta birden fazla randevu alabileceği gibi hiç randevu almayabilir. Bir randevu yalnızca bir hastaya ait olabilir.

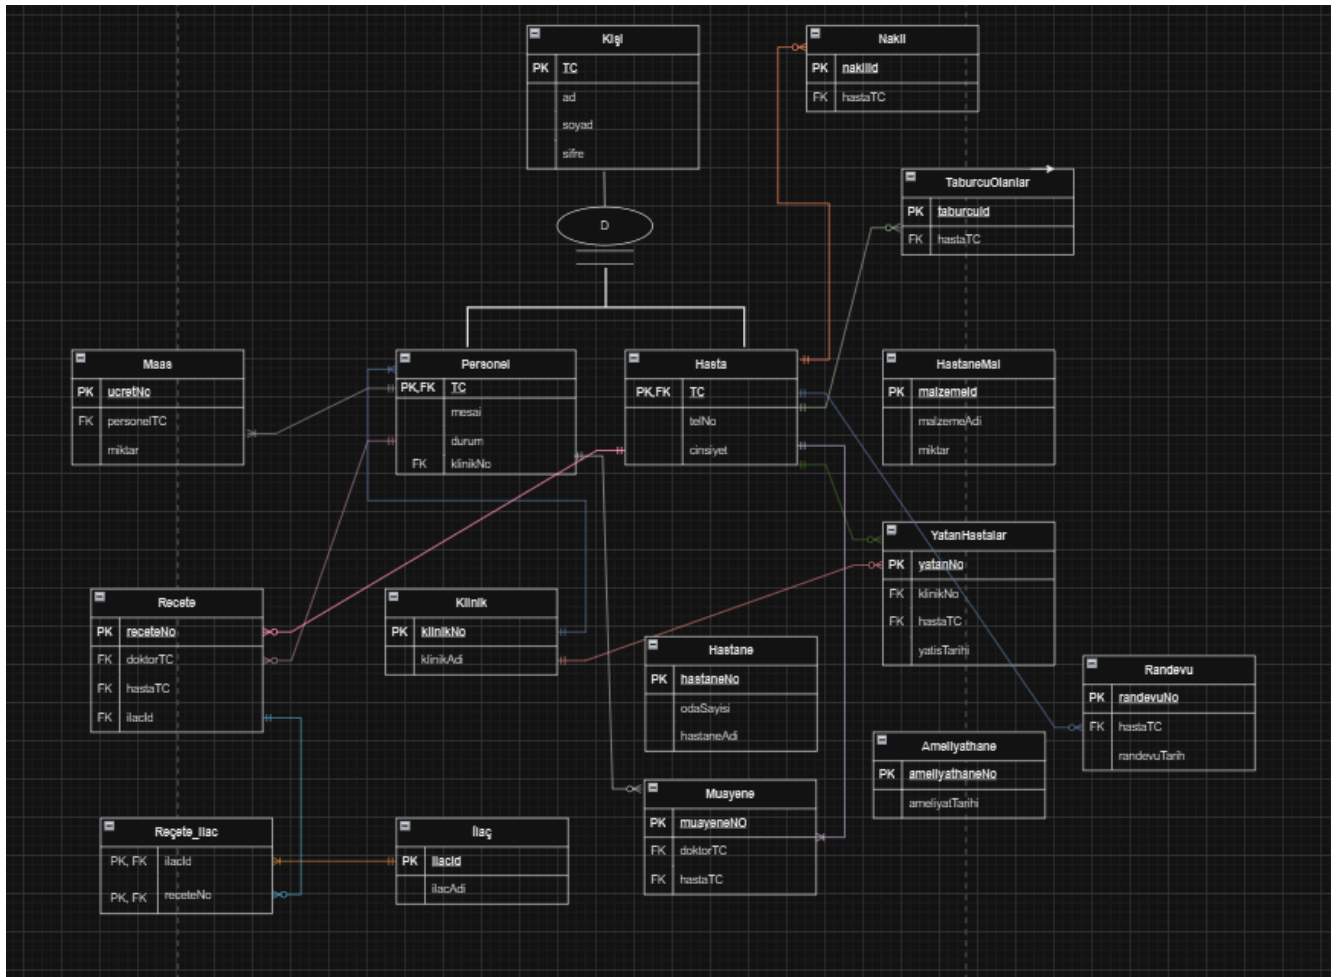

13. Bir hasta birçok kez muayene olabilir.
14. Ameliyathanenin ameliyat tarihi saklanır.
15. Bir doktor birçok reçete yazabileceği gibi hiç kimseye reçete yazmayabilir. Bir reçete yalnızca bir doktor tarafından yazılabilir.
16. Bir reçetede birçok ilaç olabileceği gibi bir ilaç birden fazla reçetede olabilir.

### İlişkisel Şema:
